Objective

Practicing effective and succinct communications to build great software is my passion. Full-stack, open-source web-development is my toolbox. Helping clients develop their ideas into a reality is my goal.

Work Experience

Standard Stamp LLC, Owner & Developer *www.standardstamp.com* (June 2012 - August 2016)

- Over 10,000 custom and stock rubber stamps sold since 2012.
- I created a custom web-based system to store designs, categorize designs, allow for quick searching, and automatically upload photo-realistic simulations of rubber stamp impressions using APIs for Etsy and Shopify.
- Our custom software system (V.A.S.T. - Virtual Automated Stamp Terminal) enabled us to quickly upload thousands of public domain designs to increase our inventory faster than competitors.
- Over \$320,000 in revenue generated since the formation of Standard Stamp with no working capital or outside investors.
- Within the company I worked to develop the product line, shoot the product photography, develop the custom software to upload product listings to web marketplaces such as Etsy and Shopify, organized contractors, worked to fabricate products, and communicated with clients daily to complete their projects.

CO-OP: NEADWERX INC, Software Developer *www.neadwerx.com* (May 2011 - May 2013)

- In my first & second semester with NeadWerx I was responsible for developing a Warehousing Application for Home Depot that is currently deployed and in use today.
- In addition to executing the development of certain NeadWerx's applications, I also interfaced with Home Depot executives, developed Statements of Work for potential projects, and aided with project planning & management.

KAUGG LLC, Sole Proprietor & Web Developer (January 2006 - 2010)

- During highschool I worked as a freelance web designer & graphic designer under my own company, KAUGG LLC. At the peak of my freelance web business I had approximately 50 clients that I designed, maintained, and hosted websites for.

Zowbie Consulting, Web Developer *www.zowbie.com* (June 2008 - June 2010)

- In addition to my own freelance endeavors during highschool, I worked for another design firm on a part time basis developing real estate websites for Keller Williams Realty, and Ian Marshall Realty

Education

Georgia Institute of Technology *Atlanta, GA* (2010-2014)

- Bachelor of Science, Computer Science

Skills

Web Technologies:

Javascript, PHP, AJAX, XML, JSON, MySQL, PostGRES, SQL, HTML5, CSS3, PERL, Python, Java, SVG, jQuery

Applications & OS:

Linux, VIM, GIT, SVN, Inkscape, GIMP, Adobe Illustrator, Adobe Photoshop

Software Design Experience:

- Wireframing
- Statements of Work
- UI Design
- Full Stack Planning
- Client Interfacing
- Client Software Demos

Personal Attributes:

Avid Runner, Voracious Reader, Graphic Designer, Part-time Poet, Serial Entrepreneur, Guitar Player, Aspiring Artist, Frequent Chef, Self taught machinist, Backwoods explorer, Aspiring Woodworker, Explorer of State parks with my wife and our two German Shepherds, and Novice Photographer

Side Projects

I have a 7 acre tract of land by the South River where I enjoy tinkering and building various side projects. I am constructing a tiny house on wheels for a mountain getaway cabin. Blacksmithing, woodworking, and gardening are all passions I enjoy.
